Imported Swedish Improved Seed Oats

Pedigreed and Selected Stock ALGOT BRAND

Imported by us Direct from Headquarters

Reasons why you should sow Improved Swedish Selected Seed Oats of Algot Brand.

1. Maximum yield per acre.
2. Highest Standard of Quality.
3. Hardy and disease-resisting constitutions

Although Swedish Oats have been raised in our country for many years, they cannot compare with the original import of Algot Brand, grown north of the 58th lat. If you have but three or four acres you can spare for Algot Brand Oats, you should sow in order to provide yourself with seed for your field crops next year, and increase your yield by 20-30 per cent.

WASA WHITE OAT.

The highest record for yield of any white oat on good outland. The panicle is short and quite small, with very stiff branches. The spikelets tend to be three-flowered and the grains are firmly set and do not fall off. It yields a wonderfully heavy crop, the straw is of middle height, and very strong. The grain is short, plump, thin-skinned and pearly white. Time of ripening medium early. This kind is not at all fastidious with regard to the nature of the soil, and will thrive well even on light or sandy soils, or vegetable moulds, provided they are in good condition. Owing to the prime quality of its grain, it is much in demand by oatmeal manufacturers.

Price Doll: in original sacks of 100 kilos net (sufficient for 2 acres).

GOLDEN RAIN WHITE OAT.

The highest record for yield of any white oat on poor oatland. The panicle is quite small but well supplied with fine upstanding branches, which are closely and uniformly furnished with spikelets. The spikelets themselves are small and short with broad glumes, generally only two-flowered. The grain, though relatively small, is broad, very full, extremely thin-skinned and of a light yellow color. This plant has the most abundant shoots of all white oats. The yield is remarkably good and it is undoubtedly the earliest white oat. The straw is strong and will stand up in the roughest weather. With regard to the quality of soil, Golden Rain is anything but exacting. It is therefore the right sort for rather light and poor oatlands, of which there are many, and it is thus the natural successor of the old common sorts.

Price Doll: in original sacks of 100 kilos net (sufficient for 2 acres).

VICTORY WHITE OAT.

The high yield of this variety is particularly striking on heavy and medium soils. The smallish spikelets of this variety bear a certain resemblance in panicle construction, to the Golden Rain Oat, but it is easily distinguished from the latter by its white, slightly bearded (not altogether awnless) grain. The panicle is rather small but compact and rich, with stiff branches; the spikelets are short, usually only two-kerneled. The grain is white of medium size, short and broad. The straw is of medium height, particularly firm and elastic. The stooling ability is good and the development in the field is remarkably regular and pronounced.

Price Doll: in original sacks of 100 kilos net (sufficient for 2 acres).

BLACK BELL OAT.

The highest record for yield of any black oat on loose ground. The panicle is of medium size, short and solid, with all the branches erect. The spikelets are short, often three-flowered, with broad yellowish-white glumes, which become bell-shaped toward maturity. The grain is large, short but full, with distinct nerves, and of a deep black color, and it is a favorite variety in the stable. The shoots are exceptionally abundant, with stiff and strong straw of uniform height, which very soon turns yellow, even to the roots. It ripens very early. Yield particularly high. This valuable oat is well suited for cold and damp soils because of its strong straw and its early maturity. As it turns yellow very soon, the straw provides good protection against the black rust, which is apt to ravage damp districts.

Price Doll: in original sacks of 100 kilos net (sufficient for 2 acres).

GREAT MOGUL OAT.

The highest record for yield of any black oat on clayey soils. The panicle is very large and long, often drooping, with branches curved at the end. The spikelets are large, with long narrow glumes, tightly compressed and pearly white. The grain is very large and long, but well-filled and plump, thin-skinned and extremely glossy, deep black and with long awns. The shoots are abundant, the straw is very tall and stiff and remains green for a long time. It ripens later than the preceding sort, about the same time as Tartarian Oats, which, however, Great Mogul seems to be destined to replace, especially on clayey soils, as the Tartarian is inferior in all respects. Yield, the highest known of all black oats, comparable to that of Golden Rain.

Price Doll: in original sacks of 100 kilos net (sufficient for 2 acres).

Above prices are f. o. b. New York, net cash against B/L. Subject to change, Sacks of 100 kilos (220 lbs.) extra at cost. Prices on carload lots on application.
